AB - JP2000290553 NOVELTY - An ink composition (P1) contains a pigment (A), water (B), a water-soluble organic solvent (C) and resin emulsion particles (D). The particles (D) contain at least a structure (D1) derived from a hydrophobic monomer (D1-a) and a structure (D2) derived from a hydrophilic monomer (D2-a). The (D1)/(D2) weight ratio is 100/0.01-5.

- DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for:

- (a) a recording method (M1), in which recording is conducted by attaching (P1) on the surface of a recording substrate;

- (b) an ink jet recording method (M2), in which recording is conducted by attaching discharged ink droplets of (P1) on the surface of a recording substrate; and

- (c) a printed material (P2) recorded by means of either (M1) or (M2).

- USE - The ink is used for ink-jet recording.

- ADVANTAGE - The ink has good storage stability, discharge stability and stability to clogging.

- (Dwg.0/0)
